

Bucket Evacuation | Duration: 8 hours

Maximum Participants: 8 students | Product Code: SHC133

COURSE TOPICS:

- Regulations on buckets and elevated platforms
- Fall restraint systems
- Bucket evacuation systems and their components
- Common hazards and how to avoid them
- Understanding anchors, connecting components, and harnesses
- How to react appropriately in an emergency
- Safe procedures for carrying out a bucket evacuation

COURSE DESCRIPTION:

Workers performing their duties in bucket trucks or elevated platforms are often times alone, and in remote areas with limited access to emergency services. In the case where the bucket loses power, or there is a failure of the hydraulic system, they can become trapped with no way down.

Our eight-hour bucket evacuation course provides students with the conditions to practice bucket evacuation maneuvers safely in our state-of-the-art training facility under various scenarios, so they are prepared when they are out in the field.

***Pre-requisite:** Basic Fall Protection Training (PCB)
